

Sizing of digital images:

It is no longer necessary to resize your digital images for competition. Also, there is no longer a need to attach your name to your image's file name.

Images will be accepted for any file size, resolution, and horizontal/vertical pixel dimensions.

However, the projection field is a widescreen ratio of 16:9. Images to this ratio will appear the largest on screen. Other ratios will be resized to appear on the screen without clipping by the use of letterboxing.

It is suggested that images larger than $\frac{1}{2}$ megapixel, resolutions of 72ppi or larger, and pixel dimensions between 2000 and 3000 may result in a better digital presentation.
